

Klingstone® *The Permanent Bunker Solution!*

Klingstone® could be the solution many Golf Course Superintendents have been looking for!

After a major downfall of rain traditional Golf Course Bunkers require Major Maintenance Work to restore the Bunker ready for play! This maintenance work can be a challenge to the Course Superintendent, who needs to get the Golf Course back in tip top condition ready for the next round of golf!

Era Polymers have teamed up with **Klingstone®** USA to bring the **Permanent Bunker Solution** to Australia. First used in 1997 for Golf Course Bunkers **Klingstone®** can eliminate the need to replace fabric liners ever again!

Klingstone® is a single component polyurethane that permanently binds and stabilises the soil/sand in the bunker; by essentially gluing them together.

Klingstone® is:

- Easy to Apply
- Reduces Bunker Contamination
- Stops Sidewall Erosion
- Reduces Drainage Contamination
- Improves Aesthetics
- Reduces Maintenance
- Maintains Bunker Consistency
- Ideal for Bunkers under Construction & Renovation

Klingstone® a Durable & Cost Effective Solution to Bunker Maintenance

Era Polymers manufacture **Klingstone®** under licence in Australia which means local delivery times!
